The Only Shower Kit Currently Available That Significantly Reduces the Likelihood of Legionella Growth

NEW Anti Bactus Kit

- Normal shower kits retain water in the body of the shower, hose and shower head after use, an ideal environment for Legionella bacterial growth. Our full drain action ensures that all these components drain of water completely, thus removing the medium for legionella growth.
- Our innovative flexi coil shower hose eliminates the possibility of a hose loop underneath the mixer valve that is normally associated with standard showers and can be an ideal location for the accumulation of water and thus an ideal environment for bacterial growth.
- Our innovative flexi coil shower hose is coloured black to ensure reduced levels of luminosity, yet another factor in reducing the likelihood of bacterial growth within the kit
- Our Patented thermostatic override system enables the mixer to be flushed through with hot water, once again reducing the likelihood of bacterial growth.
- Improved health & safety
- Cuts risk of customer litigation
