## LSP-412 Cleaning Instructions

Our showers are provided with a filter between hose and shower that makes it impossible for debris to gather in the shower. (picture 1). When needed, unfasten the hose, flush and cleanse the filter. This should be done every now and then, especially in calcareous areas. Lime deposits are formed on the outside of the strainer when water is condensed, but never on the inside of the shower. Brush while letting the water flow. Aquiv8 shower strainers are lime repellent and therefore very easy to clean. **Is the shower clogged?** Loosen the star quad and put the strainer in vinegar for a while. Then reassemble and brush it while letting the water flow (picture 2). Make sure that the air inlet is open. Maximum function is reached only if water and air inlets are open.
