# Mora Styxx

Electronically controlled mixer with LED

## Give your kitchen a new dimension

Mora Armatur's kitchen mixer, Mora Styxx, explodes the limits of kitchen units as we know them. It isn't just the electronic control panel, the LED light, the exceptional finish and the state-of-the-art visual design that are guaranteed to impress. With Mora Styxx, you regulate the temperature, the water pressure and the water jet with one hand, leaving the other hand free to wash dishes, cook or care for your children.

## It's this easy to install:

1. A small electrical box concealed under the sink unit is plugged into the electrical network. A backup battery ensures uninterrupted function if the electricity cuts out.
2. Mora Styxx is installed in the sink unit. The tap functions are easily controlled with buttons on the electronic control panel. A professional can install the whole system in about an hour.
3. It's ready for use. Now you've got a truly exceptional tap. With easy control, adjustable jet settings and a beautiful design, it's a joy to rinse both fruit and dishes.

### Jet settings

There are two different jet settings: a concentrated jet for filling a glass of water, and a practical spray setting for quickly and efficiently washing or rinsing dishes. You switch between the settings by pressing the centre button for two seconds.

### LED-lighting with temperature indication

The control display has an efficient and informative background lighting system that shows the mixing proportions between cold (blue) and hot (red) water.

### Benefits

- State of the Art technology
- Futuristic Designer looks
- Touch Button One Hand Control
- LED Temperature indicator
- Complete controls over flow & temperature
- Complete Flexability of Movement in all planes
- Water & Energy Conservation
- Sustainable Manufacture
- Anti Scald
- Last Temperature Memory Facility
- 10 Year Guarantee

## Technical Information

Electronic mixer with removable handset and integrated control panel.

- Easy to use, since all controls can be set with one hand (flow rate, temperature, spray pattern) even when the handset is removed.
- Two spray patterns (normal and rinse).
- Temperature light.
- Time-out feature shuts off mixer after 10 minutes if setting is not changed.
- Memory feature remembers previous flow rate and temperature settings.
- Safety feature prevents mixer from coming on if there is no cold water supply (prevents scalding).
- Back-up batteries ensure that the mixer still works if there is a power failure.
- Transformer for use in dry areas (IPX0).
- Max. 5 bar.
- Hole diameter □32-35mm
